BROWSER WALLET *EXTENSION*

Because Panjea works on a token based system
You will need a Polkadot compatible wallet* to use our test tokens

PRESS HERE

*Don't worry – we recommend the Polkadot wallet extension
(If you're new to Web3, Polkadot is one of the most trusted blockchains)

BROWSER WALLET EXTENSION

The image displays four sequential screenshots of the browser wallet extension interface:

- Authorize:** A warning dialog box from `polkadot-js/apps` requesting access from `https://ipfs.io/ipns/dotapps.io/`. It includes a "Yes, allow this application access" button and a "Reject" link.
- Add Account:** A screen with a large plus sign in a circle and the text: "You currently don't have any accounts. Create your first account to get started."
- Accounts:** A list of accounts including "Alice root", "Alice derived", "Bob invisible", "Dave account on Signer", "Charlie", and "Eve". Each account entry shows a unique identifier and a chain selection (Kusama or Polkadot).
- Transaction:** A screen for signing a transaction. It shows details for an "Alice derived" account, including the URL, chain (Westend), version (45), nonce (0), and method data. A password input field is present, along with a "Don't ask me again for the next 15 minutes" checkbox and a "Sign the transaction" button.
